

Senior Engineer (Microsoft and Virtualisation)

- Reliable
- Self motivated
- Results driven

- Excellent remuneration
- Challenging projects with varied leading edge technologies
- Major emphasis on learning and accreditations

Regal IT is a specialist IT services solutions provider that help our clients, design, pilot, implement and support their IT infrastructure. Regal IT applies its expertise in networking, security, operating environments, storage and application deployment and its specialist skills in consulting, integration and priority managed services to create a customised client solution.

Regal IT is experiencing exceptional growth as we are experts in our ability to plan, build and support data centre solutions and infrastructure for medium enterprise clients.

We are looking for a senior engineer to join our growing team. The core responsibilities of the role will be focused on pre-sales, design and implementation of storage and infrastructure virtualisation solutions. Consultation services to clients, fault finding and on-going support will also be part of the role.

Ideally you will have worked for a similar solutions provider and be able to work autonomously with considerable level of business and technical skills.

You must possess the following skills and experience:

- Recently worked on data centre projects for Medium Enterprise (100-1000 users)?
- Experience in implementing, upgrading large integration projects with multiple technologies (Microsoft, IBM, HP, Dell, Trend Micro, Symantec, Vmware, HDS, Brocade)
- Held a similar position with a solutions or network integrator for a minimum of 5 years
- Worked on projects with a minimum time frame of 4 weeks
- Developed relationship with clientele (trusted advisor)
- Solid background in data centre project work opposed to administration and support
- Relevant industry certifications (Microsoft 2003/2008, HDS, Symantec, Brocade, Citrix/Vmware)

To submit your application, please email your resume to hr@regal-it.com.au
